

To whom it may concern,

Thermal insulation STAY COOL is made from used glass. STAY COOL can be placed on both flat ceiling and T-bar ceiling to reduce heat transfer across roof assembly. As for the extra thick green insulation, we add mix HydroProtec™ substance and wrap the insulation with high strength, aluminum foils. The extra thick green insulation, therefore, is waterproof and offers better heat resistance than general thermal insulation. We are pleased to certify that our product meets the following requirements :
